

What is it?

Thermography is a digital infrared imaging system and is highly sensitive, non-invasive, and risk free. This technology images the state of the nervous system by detecting subtle differences in temperature readings along the spine.

Thermography detects decreased nerve function through skin temperature readings. Abnormal temperature readings are a direct correlation to the health of the nervous system.

Dr. Sharpless reported that it only takes the pressure of a dime on a nerve to decrease its ability to function by 60%.

Infrared Thermal Imaging Technology

Patient Education

Making a World of Difference
in Chiropractic Care.

Why Chiropractic?

Chiropractic is about the entire nervous system, not only the spine. The nervous system controls everything. This includes taste, touch, smell, sight, hearing, digestion, breathing, heart beat and skin temperature just to name a few.

Only 10% of your nervous system controls pain, while the other 90% controls all other functions.

As long as the brain can communicate with the body without interference, everything works.

How long does the test take?

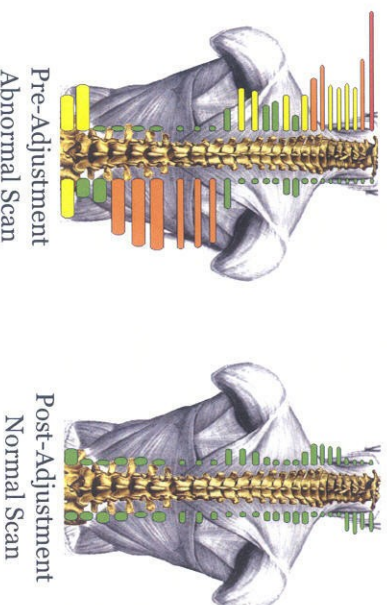

The thermal reading can be performed within a matter of 15-20 seconds. The results of the test are readily available to discuss with your doctor. Earlier models of thermography are dated back to 1948, and through technology advances, it now has entered the hi-tech computer world.

How does it work?

The TyTron C-3000 takes multiple temperature readings along the spine starting from your low back to the upper neck region. The heat scanner rolls up your spine while performing this painless test. It can be completed on patients ranging from infants to the older generation.

What does it show?

Thermography is specifically used to detect the function of the nervous system. Abnormal function is called a subluxation or misalignment. This is caused when the bones or vertebra of the spine misalign, pinching the delicate spinal nerves. Chiropractors use this technology to detect and correct subluxations by adjusting the spine, thus removing the interference.

We welcome you to our practice. We are committed to working with you to help you regain and maintain your good health and well being.

If you have any questions just give us a call. We are here to help and appreciate the opportunity to be of service to you, your family and friends.
